

### ViperHoist with EasyGrip tool

Use the EasyGrip to grip and lift various loads with a wide range of sizes. EasyGrip is a flexible grip tool that can be installed on both the ViperHoist and our range of vacuum lifters.

Fully mechanical and integrated with the hoist or vacuum lifter. The operator can simply use the controls on the handle to maneuver every movement such as up/down, grip and release load.

Very easy to use. Just lower the tool into position on the load and when you start to lift the tool will clamp the load and lift it.

Adjustable stroke with several positions for flexibility and a wider working range. The tool also includes an integrated squeeze protection to minimise risk of pinching.
